Samples need to be de-chlorinated during collection or noted otherwise so we can de-chlorinate at Lab.

Also, utilize 1 liter polyethylene sample bottles if possible.

Wes,

Jim

In the past with these exotic chemicals we've always been stung by the presence of chlorine in the sample negating any recovery attempts by the chemists and we lost hours of analytical time. So, this time can we run a set of dechlorinated samples with the chlorinated samples in case we experience the same set back? Thanks,

See attached update.

Cari-Michel said the preliminary results of the samples showed some detects for the chlorothalonil, but below the TCEQ calculated health advisory of 50 ppb. Samples for cyanide (a degradation product of MBT) showed some detects but below the MCL of 200 ppb.

May have more on the results later this evening.
